

Penticton Zoom Teeth Whitening

ZOOM In-office whitening can give you discernible results in under two hours of treatment! ZOOM uses a combination of specially created ultraviolet lamps and a photosensitive bleaching gel to skillfully lighten your teeth in the shortest time possible. Discoloration triggered over several years can easily be removed with this treatment method. Certain practices that induce discoloration such as drinking coffee, teas, red wine, along with chewing and smoking tobacco, as well as eating specific pasta sauces and curries are no match for ZOOM whitening. Additionally, this remedy option has been proven to be safe and very efficient and lasts for a considerable amount of time. A brighter, whiter smile can enhance your confidence and self image and develop remarkable impressions on people.

A careful routine of dental hygiene practices like regular flossing and daily polishing as well as regular oral health cleaning will assist you to keep your smile as bright as possible. Results will ultimately differ although as many as eight shades whiter can be achieved in just one appointment.

Custom dental bleaching trays for home utilization are incorporated in the take-home advanced whitening kit. Moreover, syringes filled with whitening gels in addition to directions will be furnished for you at home use. The oral trays stuffed with bleaching gel might be worn anywhere from thirty minutes to four hours each day and night for nearly 2 weeks. The whitening gel functions by seeping inside the tooth enamel pores and creates a chemical reaction that loosens and breaks the staining compounds that have induced the discolouration. You can even count on a results making your teeth six shades whiter when using this treatment method over the duration of seven-fourteen days of time.
